

Guide Entretien

May 2023

1 Introduction

The interview guide is used in the context of qualitative interviews in order to structure the discussion. It makes it possible to determine a “logical” flow to approach the subjects. We have structured the questions following the funnel principle: start with the most general and ”simplest” subject for the respondent to address, and gradually move towards the most specific subjects that require reflection.

2 The Questions

- **Q1** Can you please introduce yourself, including your name, age, field of study, and current year of study in university?
- **Q2** Can you tell us more about your field of study and the technologies you use?
- **Q3** What programming languages are you currently studying, and are there any frameworks that you are learning in conjunction with those languages?
- **Q4** Have you ever worked on any projects that utilized frameworks, and if so, can you describe your experience?
- **Q5** During your learning phase, did you experience any difficulties transitioning from programming languages to using their associated frameworks?
- **Q6** What do you see as the main utilities of frameworks in project making, and how do they help streamline the development process?
- **Q7** Do you think it would be beneficial for universities and colleges to teach more frameworks, and if so, why?

- **Q8** Some people find it challenging to learn and use frameworks. Do you have any suggestions for overcoming these difficulties and improving proficiency with frameworks?
